Top and bottom gift box surface treatment :

1. UV Spot: Ultra-violet cured coatings can be applied over ink printed on paper and dried by exposure to UV radiation. UV coatings can be formulated up to 100% solids so that they have no volatile component that contributes to pollution. This high solids level also allows for the coating to be applied in very thin films.

UV coatings can be formulated to a wide variety of gloss ranges. UV coating can be applied via most conventional industrial coating applications as well as bysilkscreen.

2. Glossy finish: Art papers are one of the highest quality printing papers and are used for illustrated books, calendars and brochures. The grammage varies from 100 to 230 g/m².

These papergrades are triple coated with 20 - > 40 g/m²/side and have matte or glossy finish. Higher qualities often contain cotton.

3. Matt Finish: A dull finish or surface, as opposed to a shiny one.

4. Varnish: Resin dissolved in a liquid applying on wood, metal, or other materials to form a hard, clear, shiny surface after dry.

5. Foil Stamping: Typically a commercial printing process, is the application of metallic or pigmented foil on to a solid surface by application of a heated die onto foil, making it permanently adhere to the surface below leaving the design of the dye.

6. Embossing: The raising of paper and other non-metal products using specific tools to accomplish the task.

Welcome to buy our company' s color printed food cartons.
