White paperboard box for rice surface treatment :

1. UV Spot: Ultra-violet cured coatings can be applied over ink printed on paper and dried by exposure to UV radiation. UV coatings can be formulated up to 100% solids so that they have no volatile component that contributes to pollution. This high solids level also allows for the coating to be applied in very thin films.

UV coatings can be formulated to a wide variety of gloss ranges. UV coating can be applied via most conventional industrial coating applications as well as by silk screen.

2. Glossy finish: Art papers are one of the highest quality printing papers and are used for illustrated books, calendars and brochures. The grammage varies from 100 to 230 g/m<sup>2</sup>. These paper grades are triple coated with 20 - > 40 g/m<sup>2</sup>/side and have matte or glossy finish. Higher qualities often contain cotton.

3. Matt Finish: A dull finish or surface, as opposed to a shiny one.

4. Varnish: Resin dissolved in a liquid applying on wood, metal, or other materials to form a hard, clear, shiny surface after dry.

5. Foil Stamping: Typically a commercial printing process, is the application of metallic or pigmented foil on to a solid surface by application of a heated die onto foil, making it permanently adhere to the surface below leaving the design of the dye.

6. Embossing: The raising of paper and other non-metal products using

specific tools to accomplish the task

4. Strict quality control system, make sure every piece of product to be 100% qualified.
5. With efficient management and high productivity, short delivery time within .
6. Near Sea Port and Air port, quite convenient for business and transportation.

1. Do you have a minimum order quantity?

For custom packaging product, we do have set an MOQ of 500 units or 1000 units, you can see the MOQ number set in this product details above, if not sure please advise our sales in advance. We set the MOQ because there's fixed factory fees for custom packaging production, when these cost add to product unit price it will be extremely high, such as only order 100pcs, 200pcs.

What are the Fixed Factory Fees? For a custom printed paper box, the

cutting die fees, CTP fees, machine setup fees are all fixed no matter your order quantity is 100pcs or 1000pcs. Such fees will cost us around 100-300USD based on your box specifications. The important factor includes the box size (big or small), color printing (single color, or CMYK full color, or with PMS colors, or with Metallic PMS colors), die-cut complexity (a simple die-cut or complex die-cut), finish (spot UV, foil stamping, Embossing, debossing, laminating and varnishing etc).

As you can see, at least around 400USD will be introduced no matter your order quantity is small or big. And this is why the unit price is extremely high when your order quantity is just too small like 100pcs, 200pcs. In this case we have to set a MOQ to give a better price to you.

## 2. How long Time for my order production?

It always takes 2 weeks Max for order quantity less than 10,000 pieces. For bigger quantity or the product need too much man-made process and has very complex specifications, it will be longer. For rush order we can also expedite the process and try best to meet your timeline. You can advise our sales before ordering.

## 3. Can I order a custom Sample before place bulk order?

Yes, we can make a printed or plain sample with your size etc specifications for approve before bulk order. Sample time for printed sample is 3-7 days for different products, and plain sample could be couple of days faster. Custom sample cost about \$50~100 USD for most

box products in different specifications.

4. Could you estimate the DDU price (price with delivery cost) for my order?

Yes, as we have our long term cooperated shipping forwarder, can provide international door to door bulk order deliver service. Just let us know your destination or nearest seaport/airport in advance, then we can estimate the cost for you.
